CADENCE ANDERSON

Charlotte, NC • cadence.anderson88@gmail.com • 704-315-9360 • github.com/CadenceElaina • cadence-anderson.netlify.app

EDUCATION

University of North Carolina at Charlotte — Charlotte, NC *Expected: Fall 2027*

Bachelor of Science in Computer Science | Concentration: Data Science *GPA: 3.33*

Relevant Coursework: Data Structures & Algorithms, Logic & Algorithms, Database Design & Implementation, Calculus I–II

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Java, Python, SQL

Frameworks / Libraries: React, Vite, Node.js, Express.js, Spring Boot, Jest, Supertest

Databases / Tools: MongoDB, PostgreSQL, Git, GitHub, Postman, REST APIs, Linux (Fedora), Vercel

PROJECTS

Aurora — Spaced Repetition for Interview Prep • *Next.js, TypeScript, PostgreSQL, Supabase, Drizzle*

Live ↗ | GitHub ↗ | Demo Video ↗

- Implemented a spaced repetition scheduler for NeetCode 150 using a modified FSRS algorithm with custom stability updates — outcome multipliers and retrievability-decay modifiers calibrated to coding problem retention patterns
- Designed a 0–100 composite readiness score weighting coverage (30%), retention (40%), category balance (20%), and consistency (10%) to project interview-day capacity via day-by-day simulation
- Open-sourced and shared with developer communities; iterated on GitHub webhook sync for automated submission tracking and mock interview mode based on community feedback

Finch — Market Intelligence Dashboard • *React, TypeScript, Vite, Node.js, Redis, Gemini AI*

Live ↗ | GitHub ↗ | Demo Video ↗

- Built a Google Finance-inspired dashboard with live stock data, watchlists, and portfolio tracking; designed a 4-tier API fallback chain with circuit breakers, in-flight Promise deduplication, and per-provider rate limiting to ensure reliability across free-tier data sources
- Engineered a multi-layer caching pipeline — Vercel cron pre-warms Redis at market open, Edge caching with stale-while-revalidate handles CDN-level freshness, and React Query per-symbol hydration with localStorage TTL fallback delivers sub-100ms initial loads
- Integrated Gemini 2.5 Flash with Google Search grounding for contextual market summaries and multi-turn research chat; automated deployments via GitHub Actions CI/CD

Journal — Full-Stack Journaling App • *React, Node.js, Express, MongoDB, JWT, Jest*

Live ↗ | GitHub ↗ | Demo Video ↗

- Implemented production-grade auth: JWT access/refresh token rotation, TOTP-based 2FA with hashed backup codes, account lockout after failed attempts, and cross-tab token sync via 3-tier fallback (Web Locks API → BroadcastChannel → localStorage) to prevent race conditions
- Achieved comprehensive security coverage with 59 integration tests spanning authorization enforcement, token invalidation, account lockout, and pagination edge cases; hardened API with Helmet.js headers, rate limiting, and input sanitization
- Shipped a self-contained demo system with auto-generated sessions, seeded data, 30-minute TTL, and cron-based cleanup — enabling zero-setup evaluation without exposing real user data

VireoFi — Personal Finance Dashboard • *React, Node.js, Express, MongoDB, Docker*

GitHub ↗

- Built a multi-stage import pipeline for CSV/PDF bank statements with a 4-tier merchant matcher that cascades through description matching, name inclusion, and keyword scoring with confidence scoring and duplicate fingerprinting
- Implemented budget tracking, net worth monitoring, cash flow analysis, and time-aware financial projections; deployed as a 3-service Dockerized stack (MongoDB, Express backend, Nginx reverse proxy)

EXPERIENCE

Wells Fargo Advisors • Financial Advisor • Charlotte, NC *June 2024 – February 2026*

- Managed 20–30+ daily client calls, executing trades and financial planning in compliance with Regulation Best Interest
- Identified redundant data-entry steps in lead management; partnered with Business Systems Analysts to design “Quick Lead” templates that pre-filled client data, eliminating ~5–6 clicks per lead and rolling out to 200+ advisors nationally
- Authored monthly asset reports translating raw portfolio datasets into strategy insights, directly informing regional wealth management decisions
